NEMO 2009 : coming soon and new forum

Since last september, the NEMO reference is based on the nemo_v3 release.

As usual, some bugs have been detected and corrected since, see the Trac report here:

<http://forge.ipsl.jussieu.fr/nemo/report/27>.

Concerning the developments, the beta release of the coupling interface has been implemented (see below).

The 2009 workplan will be validated during the Steering Committee meeting on January 20th, detailed information on the planning for 2009 coming after this date.

Sharing expertise:

Concerning your projects with NEMO, please add or update your informations on the NEMO project database here:

<http://www.nemo-ocean.eu/index.php//About-NEMO/Projects>

To find a publication in relation with NEMO, and to add yours, please have a look here:

<http://www.nemo-ocean.eu/superbib/en/one/main.php>

NEMO in coupled mode(s)

A tag will be added in the reference soon, including the bugfixes and the coupling interface.

The new IO interface for outputs allowing much easier implementation of new diagnostics will come very soon (February)

We strongly suggest that the IPCC AR5 projects start from this new tag from now on.

If you are concerned by IPCC AR5 using NEMO, and more generally by NEMO in coupled mode, please have a look on the new forum open on the NEMO website here:

<http://www.nemo-ocean.eu/index.php//Developing-with-NEMO/Forum/NEMO-in-coupled-mode-towards-IPCC-AR5-and-others>

Happy new year to each of you,

No
